QMS Audit 03 : PURCHASES

Section 1 - Suppliers and Subcontractors

Question 3.1

Requirements vs Suppliers

The company defines its requirements towards its own suppliers and subcontractors, in particular in terms of controlling the quality, compliance and safety of the products supplied. These requirements are formalized in a document (specifications) which must be presented and accepted (contractually) by the suppliers and subcontractors. It must reflect the requirements expected on the finished product of the company.

A. Supplier and subcontractors evaluation procedure, evaluation criteria, performance management are clearly defined.

B. Supplier and subcontractors evaluation procedure, evaluation criteria, are clearly defined, but performance management is not defined.

C. Supplier and subcontractors evaluation procedure is defined only, but no formal, evaluation criteria, nor performance management.

D. No any formal supplier management procedure or instruction.

Guidance to Auditor :

The auditor will endeavor to verify in particular the relevance of the quality assurance put in place as well as the product controls. The auditor will not check all the documents but some of them, for example concerning critical suppliers.

Question 3.6

Specifications

Inspection for surface treated material to be used in contact with food: Sufficient checkpoints on component:

1. Coating material specification control
2. Coating material test report availability.
3. Coating material shelf-life
4. Coating / plating adhesion test.
5. BPA (Bisphenol A) testing or report checking availability.

All the batches of coating are controlled at arrival.

A. Inspection for surface treated material to be used in contact with food:

Sufficient checkpoints on component:

1. Coating material specification control
2. Coating material test report availability.
3. Coating material shelf-life
4. Coating / plating adhesion test.
5. BPA (Bisphenol A) testing or report checking availability.

All the batches of coating are controlled at arrival.

B. NA

C. Missing one of below checkpoints during Inspection for surface treated material.

1. Coating material specification control
2. Coating material test report availability.
3. Coating material shelf-life
4. Coating / plating adhesion test.
5. BPA (Bisphenol A) testing or report checking availability.

All the batches of coating are controlled at arrival.

D. No any inspection for surface treated material to be used in contact with food.

Guidance to Auditor :

None.
