QMS Audit 04 : RECEIPT OF RAW MATERIALS AND COMPONENTS

Section 1 - Reception (Warehouse)

Question 4.1

The warehouse conditions are such that they allow good control of the quality and integrity risks of the materials and components. After unloading, the receptions are subject to a quarantine / release system, according to the reception control results.

- A. There are complete control procedures and management is in place.
- B. Some controls can be managed, but there is room for improvement.
- C. There are some controls, but there are greater risks.
- D. No receiving program, or very confused.

Guidance to Auditor :

The acceptance procedure must include these risk control requirements. Generally, there is a dedicated sampling area to protect the integrity of the raw materials during their handling for inspections. The general conditions are also important:

light, space, cleanliness, etc.

Question 4.2

Storage Conditions

The storage conditions are such that they allow good control of the quality and integrity risks of the materials and components. Especially in relation to temperature, dust, humidity, light, etc.

- A. The storage conditions are such that they allow good control of the quality and integrity risks of the materials and components.
- B. The storage conditions basically meet the requirements, but there is room for improvement.
- C. The storage conditions are at great risk.
- D. Serious security risks exist in storage conditions.

Guidance to Auditor :

Storage conditions can be outsourced. The conditions must meet the same requirements. In this case, ensure that this is required of the logistics service providers via specifications / contract / monitoring of the service (audit, indicator, complaint made to the service provider, etc.).

The storage conditions apply for any raw material or component arriving and stored at the factory (before or after a check on receipt).

Question 4.3

Chemical Marking and Labelling 

Are all chemicals used on the factory site (including storage facilities) as recommended on the manufacturer's label to prevent them from deterioration or degradation? Such as dangerous goods category (Class 3 = Flammable liquid; Class 4 = Flammable solids; Class 5 = Oxidizing substances; Class 6 = Toxic substances; Class 8 = Corrosive substances) Special note: Class 3 + 4 cannot storage with Class 5 in the same warehouse.

- A. All chemicals have marking and labelling store according to labels.
- B. Most chemicals have marking and labelling.
- C. Most lack marking and labelling.
- D. No marking and labelling.

Guidance to Auditor :

None.

Question 4.4

Segregation

Clear segregation of material for food grade and non-food grade.

1. Clear control for risk of cross contamination.
2. Clear flow for usage.

- A. Separation management is in place to control cross contamination risk.
- B. There is differentiated management, but there is room for improvement.
- C. Insufficient differentiation management, with greater risks.
- D. There is no differentiated management, and there is a large security risk.

Guidance to Auditor :

None.

Section 2 - Control at Reception

Question 4.5

Control at Reception

Each raw material is subject to a control plan adapted to the criticality of the material / supplier pair and based on specifications (see 3.2.1), including tolerances, methods, tools, sampling, frequencies, records and responsibilities . The conditions of these checks must be adapted (workstation, instructions, equipment, etc.)

- A. The incoming quality control is accurate, complete, and applied.
- B. There is a receiving control plan and most records are kept. But there is room for improvement.
- C. There is a receiving control procedure, but there is insufficient enlargement, and the control plan is not applicable. Missing control record.
- D. No receive control.

Guidance to Auditor :

None.

Question 4.6

Compliance Documents

When relevant, the raw materials and components are delivered with documents from the suppliers, such as certificates of conformity, certificates of analysis, test reports, etc. These acceptance documents must be checked against the specifications, accepted or not accordingly, and archived in a traceable manner.

- A. The documents of conformity are available and relevant.
- B. Most documents are archived..
- C. The documents are not archived. Some requested documents are not available.
- D. There is no document of conformity for the incoming product. There is no checkpoint about conformity documents in the factory control plan.

Guidance to Auditor :

None.

Question 4.7

Non Conformities

A procedure is set for the management of non-conformities upon receipt. This includes, at a minimum, isolation of non-compliant products, ad hoc identification, risk assessment, corrective actions and follow-up vis-à-vis the supplier concerned, etc.

A. There is nonconformity control procedures, records and relevant handling. Very good management.

B. There is nonconformity control procedures, records and relevant handling. But there is room for improvement.

C. There are non conformity control procedures and some records are missing. Lack of some identifications, risk assessment, follow-up actions, etc.

D. There is no non conformity control procedure. There are no records. Large risk.

Guidance to Auditor :

None.
